

SKIRTALL®: FRESH TO IMPRESS

SKIRTALL ROSE and Convenience Food

Introduction

In recent years, the focus has been on optimisation and further development of the SKIRTALL concepts. As already proven this innovative and patented SKIRTALL design has possibilities with many usp's for ready meals and side dishes.

SKIRTALL has great potential for the Cure and Care markets. Because of this presentation sick and elderly people appreciate the professional and authentic looks of the packaging. For them the meals are a treat on a day, we have to live up to their expectations.

SKIRTALL Rose is available on industrial sealing machines and MSS table seal machines.

The SKIRTALL Rose is available with re-close able label or -film, and possible with an insert cup, for a duo-packaging.

Availability

The SKIRTALL Rose is available in Injection moulding PP cups and trays, in several heights and compartments. But other forms, cups, trays are possible, also in PET.

Food safety

Hygienic: Packaging is meant to protect the food. Before you eat your food, a packaging is carried around multiple times by staff in production, shop and yourselves. Every time it is touched can cause contamination. SKIRTALL protect the food and the packaging for 100%.

Food terrorism: By sealing packaging nobody can mess with the food. A lot of food reaches the consumer by take away, home delivery or regional producers. Consumers demand a first user seal.

Use friendly

Easy opening: elderly and children have a problem with 80% of all packaging. Bad eyes, less motoric fingers and little strength are the reasons. With SKIRTALL a consumer can open the packaging blindfolded with the whole hand.

A lid of a packaging can also be unpractical and inconvenient. A combination of SKIRTALL with a reclose-able film or a detachable one for portion packs is a user-friendly way of opening and store food.

Attention and presentation:

Nowadays it is very important you have more attention on the shelf or online. Customers decide in a few seconds which product they are going to buy. SKIRTALL excels in attention. This combined with a great authentic presentation will guarantee great sales and high compliance for your customer. **Taste is for 50% based on the looks!**

Industrial application for food producers

The well-known sealing machine manufacturers can process SKIRTALL for industrial food producers. You need an adapted sealing tool which not only seals a film on a packaging, but also turns it into an attractive SKIRTALL packaging. These sealing tools are available for all capacities, from 600 to 6.000 packages per hour (depending on type, size of packaging and investment). These sealing machines can be expanded with many options such as labelling, coding, control systems, resealable films, insert cups and more.

Flexible application for In Home Cooking, Home Delivery, Caterer, Restaurants and Local for Local

SKIRTALL is also possible to produce on small scale with the flexible MSS table seal equipment for cups and trays.

In Home Cooking: Retail has to find an answer against the online growth. They are searching for more artisanal experience on the floor. With their in store products they can assemble great fresh foods and with the MSS seal machines they have distinction regarding the packaging industrial produced on the shelf and authentic produced in home.

Caterer and restaurants see their business grow because of single living people, closed restaurants because of Covid-19 and changes in eat moments, full agenda's, on the go, etc. Consumers demand a food save (hygienic and food terrorism) product, easy to use and great presentation.

Local for Local: Farmers and growers with great healthy products see a big opportunity to satisfy consumers needs regarding health and food safety. With the MSS table seal machines they can pack and seal small volumes with distinction to retail and their own brand and design.
